#### NOTE

This and other government publications may be purchased from local authorized agents and other community bookstores or by mail order.

Mail orders should be sent to Publishing Centre, Supply and Services Canada, Ottawa, K1A 0S9 or, in the case of Statistics Canada publications only, to Publications Distribution, Statistics Canada, Ottawa, K1A 0T6.

All inquiries about the content or technical aspects of the publications dealing with incomes should be addressed to the Data Dissemination Unit of the Consumer Income and Expenditure Division of Statistics Canada in Ottawa (992-4742) or to a local office of the bureau's User Advisory Services Division:

## INTRODUCTION

This report relates 1976 household facilities and equipment data to the level of household income received in the preceding year (1975). Similar reports are also available for the years 1968, 1972 and 1974.(1) Estimates, which represent virtually all private households in Canada,(2) are based on a sample of approximately 21,000 households. Several Statistics Canada household surveys, conducted in the spring of 1976, served as the data source.(3)

The content and organization of this publication is patterned after the 1974 report (Catalogue 13-565) except that the current issue includes no feature article. Selected low income statistics are however given in a new table.

In the area of concepts and methodology historical consistency has been maintained. There are, however, a few minor departures. For example, since the last report, categories used for classification of education levels have been revised to be consistent with the current Labour Force Survey practice. Metropolitan area boundaries have also been updated in light of the 1971 Census results. Finally, for collection of household facilities and equipment data, an increased use was made of telephone interviews.

There are three distinct sets of tabulations in this report. The first section contains standard tabulations where percentage distributions are given either by or with-in household income groups. The second section provides distributions within income quintiles, and the last, miscellaneous section offers selected data on low incomes and rents.

In the first section, separate tables are supplied for the following types of households:

all households;

single unit (family) households - households consisting of only one family;

single unit (unattached individual) households - one-person households;

multi-unit households - all remaining households.

Cette publication présente les données de 1976 sur l'équipement ménager en fonction de la tranche de revenu des ménages l'année précédente (1975). Vous pouvez vous procurer des bulletins semblables pour 1968, 1972 et 1974(1). Les estimations, qui représentent presque tous les ménages privés du Canada(2), sont fondées sur un échantillon d'environ 21,000 ménages. Les données proviennent de plusieurs enquêtes effectuées par Statistique Canada au printemps de 1976(3).

Le contenu et la présentation de cette publication s'inspirent du bulletin de 1974 (n<sup>o</sup> 13-565 au catalogue) mais on n'y trouve pas d'article de fond. Un nouveau tableau présente cependant certaines statistiques sur les faibles revenus.

Les concepts et les méthodes sont conformes à ceux des années passées à quelques exceptions près. Par exemple, depuis la parution du dernier bulletin, nous avons modifié les catégories de classement des niveaux d'instruction pour les rendre conformes à celles de l'enquête sur la population active. De plus, nous avons retracé les limites des régions métropolitaines à la lumière des résultats du recensement de 1971. Enfin, nous avons fait un plus grand nombre d'interviews téléphoniques pour recueillir les données sur l'équipement ménager.

Trois séries de tableaux distincts sont présentées ici. La première série comprend des tableaux ordinaires dans lesquels les répartitions en pourcentage sont présentées par tranche et sous-tranche de revenu. Les tableaux de la deuxième série contiennent des répartitions par quintile de revenu et ceux de la troisième présentent certaines données sur les faibles revenus et les loyers.

Dans la première série, des tableaux distincts portent sur les genres de ménages suivants:

tous les ménages;

ménages unifamiliaux - ménages comptant une seule famille;

ménages individuels - ménages formés d'une personne seule;

ménages multiples - tous les autres ménages.

- (1) The list of published reports is on the back cover.
- (2) For a detailed discussion of the methodology adopted see Sources and Methods, page 93.
- (3) See Coverage, page 93.

- (1) La liste des bulletins publiés figure sur la couverture arrière.
- (2) Pour obtenir un exposé détaillé des méthodes utilisées, consulter Sources et méthodes, page 93.
- (3) Voir page 93, Champ de l'enquête.

Due to the broad range of data offered in this section, it was necessary to split most of the tables into two parts, A and B. Both parts cover the same universe and use identical income groups. Part A is confined to statistics on household and dwelling characteristics (number of persons, rooms, tenure, etc.), while details on household facilities and equipment (washing machines, automobiles, etc.) are given in Part B.

Quintile tables in the second section follow the same basic sequence except that the last sub-section (multi-unit households) was dropped. Representation of this type of household in the sample was found not to be quite adequate for quintile tabulation purposes. To facilitate intertemporal comparisons, data are given for all four years.

In the last section, details on rents are given only for non-farm tenant-occupied dwellings. For conceptual reasons, low income statistics are confined to single unit households only. Parallel data are provided for 1973. The delineation of low income families from other families is based on the "revised low income cut-offs" framework, appropriately adjusted for changes in consumer prices.

To correct data gaps arising out of the reduced content of the 1974 and 1976 reports, as compared to the 1972 publication, supplementary tables are being produced for distribution on request. Also, for applications requiring micro-data use, computer tapes are available for the years 1972, 1974 and 1976. All enquiries should be forwarded to the Data Dissemination Unit, Consumer Income and Expenditure Division, Statistics Canada, Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Vu la vaste gamme de données présentées dans cette série, nous avons dû diviser la plupart des tableaux en deux parties, A et B. Les deux parties visent le même univers et portent sur les mêmes tranches de revenu. La partie A comprend des statistiques sur les ménages et les logements (nombre de personnes, nombre de pièces, mode d'occupation, etc.) et la partie B, des données sur l'équipement ménager (machines à laver, automobiles, etc.).

Dans la deuxième série, les tableaux présentant les quintiles suivent la même disposition mais nous avons supprimé la dernière sous-section (ménages multiples). Nous avons jugé que la représentation de ce genre de ménage dans l'échantillon ne convenait pas à la totalisation par quintile. Pour faciliter les comparaisons dans le temps, des données sont présentées pour les quatre années.

Dans la dernière série, les loyers ne sont indiqués que pour les logements non agricoles occupés par un locataire. Pour des raisons d'ordre conceptuel, les statistiques sur les faibles revenus ne sont présentées que pour les ménages unifamiliaux et individuels. Nous avons fourni des données parallèles sur les revenus touchés deux ans plus tôt, soit en 1973. Les catégories utilisées s'inspirent des "nouveaux seuils de faible revenu" et sont ajustées en fonction de l'indice des prix à la consommation.

Pour combler les vides résultant de la réduction du contenu des bulletins de 1974 et 1976 par rapport à celui de la publication de 1972, nous produirons des tableaux supplémentaires que vous pourrez vous procurer sur demande. Pour les utilisateurs de micro-données, il existe des bandes mécanographiques pour 1972, 1974 et 1976. Toute demande de renseignements doit être adressée à la Sous-section de la diffusion des données, Division du revenu et des dépenses des consommateurs, Statistique Canada, Tunney's Pasture, Ottawa (Ontario), K1A 0T6.

## SUMMARY

### Household Facilities by Income and Other Characteristics

Some household items are found in almost every home. Included in this group are telephones, televisions, radios and refrigerators. However, the possession of other household articles appears to be dependent on the income of the household. In general as the household income increases there is a tendency for the household to acquire additional and/or newer equipment or facilities. While economic circumstances play an important role in affecting dwelling choices and the assortment of household equipment being used, the nature of the household itself is also a key factor. As households undergo structural changes (consider, for example, the continuing trend toward smaller households and the changing age profile of household heads) the needs and preferences in the area of housing and equipment change accordingly. When examining historical trends, both factors should be kept in mind.

### Single Unit (Family) and All Households

The following table presents a comparison between the 1974 and 1976 data for various dwelling characteristics and household items for all households and for single unit (family) households. In 1976, 76% of households were of this type. The household average income for all households increased from \$11,609 to \$14,983, or about 29%, between 1973 and 1975. For single unit (family) households the change in household average income from \$12,791 to \$16,848 during the same two-year period represented approximately a 32% increase. In both 1974 and 1976 a larger household size and greater number of rooms were accompanied by a higher household income. For single unit (family) households - an increase in home ownership occurred between 1974 and 1976. However, the occurrence of single detached dwellings decreased in the same period indicating, perhaps, a tendency by households towards the purchase of condominium dwellings such as apartments or townhouses. Possession of most household facilities requires a slightly above average income. In the case of television sets, not only does the rate of absence of a television set decline quickly but, as income increases, there is a strong tendency to procure a colour set as an addition to or as a replacement of the existing black and white set. A similar situation is found in the number of automobiles a household has; with an increasing household income, two-car households become more common.

## RÉSUMÉ

### Équipement ménager selon le revenu et d'autres caractéristiques

Certains articles ménagers, notamment le téléphone, le téléviseur, la radio et le réfrigérateur, se retrouvent dans presque tous les foyers. La possession d'autres articles ménagers semble toutefois être en rapport avec le revenu du ménage. En règle générale, s'il y a augmentation du revenu, on remarquera une tendance à acquérir des articles supplémentaires ou plus récents. La conjoncture économique n'est pas le seul facteur qui détermine le choix d'un logement et de l'équipement ménager; la nature du ménage y est aussi pour quelque chose. En effet, à mesure que les ménages subissent des changements structuraux (qu'il suffise de rappeler, par exemple, le nombre toujours croissant de petits ménages et le nouveau profil d'âge des chefs de ménage), leurs besoins et leurs préférences en matière de logement et d'équipement ménager changent en conséquence. Il faut garder ces deux facteurs à l'esprit lorsqu'il s'agit d'étudier les tendances chronologiques.

### Ménages unifamiliaux et l'ensemble des ménages

Le tableau suivant établit une comparaison entre les données de 1974 et de 1976 selon diverses caractéristiques des logements et articles d'équipement ménager différents pour l'ensemble des ménages et les ménages unifamiliaux. En 1976, les ménages unifamiliaux représentaient 76 % de l'ensemble des ménages. De 1973 à 1975, le revenu moyen de tous les ménages a grimpé de \$11,609 à \$14,983, une hausse de quelque 29 %. Le revenu moyen des ménages unifamiliaux est passé de \$12,791 à \$16,848 au cours de cette période, marquant une augmentation d'environ 32 %. En 1974 et 1976, la taille accrue des ménages et le nombre supérieur de pièces d'habitation s'accompagnaient d'un revenu plus élevé. On a observé un plus grand nombre de ménages unifamiliaux accéder à la propriété au cours de cette période. Par contre, la proportion de logements individuels non attenants a accusé une baisse, ce qui traduit peut-être une tendance des ménages à acheter des condominiums tels que appartements ou "town houses". La possession de la plupart des articles d'équipement nécessite un revenu légèrement supérieur à la moyenne. Dans le cas des téléviseurs, non seulement le nombre de ménages privés de cet appareil décroît-il rapidement, mais on constate également lorsqu'il y a augmentation du revenu, une tendance marquée à l'achat d'un télécouleur comme deuxième appareil ou pour remplacer le téléviseur en noir et blanc. Parallèlement, il est de plus en plus fréquent de voir un ménage posséder deux voitures, si son revenu marque une hausse.

### Single Unit (Unattached Individual) Households

The income of single unit (unattached individual) households, 18% of all households, differs markedly from that of single unit (family) households. A large majority of single unit (unattached individual) households is concentrated in the lower income groups. The average income of these households in 1975 was \$6,908 which is about 5% higher than the average income of all unattached individuals.<sup>(1)</sup> This again indicates that unattached individuals with very low incomes are more likely to share, out of preference or need, accommodation with other family units.

The household facilities and equipment available to single unit (unattached individual) households were, on the average, less than those enjoyed by larger households. To some extent, this may be due to the lesser needs of one-person households. However, lack of certain facilities - e.g., 4% of single unit (unattached individual) households compared to 2% in the case of single unit (family) households, were without bath facilities - can only be ascribed to their generally low incomes.

### Multi-unit Households

About 6% of all households in 1976 were multi-unit households. In spite of their multiple nature, however, the average size of these households was smaller than that of single unit (family) households.

A meaningful analysis of the interrelationship of income and household facilities and equipment in multi-unit households is extremely difficult from the data compiled for this report. The number of these households in the sample is too small to allow production of reliable distributions by different characteristics. Accordingly this report contains only two tables on these households (Tables 8 and 9). Besides the restriction of a small sample, there is also a conceptual problem relating to income. It is possible to distribute these households either by total income of the household or by total income of the primary economic family unit. The two resulting distributions will be different in shape and, unless analyzed by detailed composition of these households (which is not possible with the existing sample), can point to misleading conclusions.

(1) See Income Distributions by Size in Canada, 1975 (Catalogue 13-207), Table 27.

### Ménages individuels (personne seule)

Le revenu des ménages individuels (personne seule), qui représentent 18 % de l'ensemble des ménages, diffère sensiblement de celui des ménages unifamiliaux. Une forte part de ces premiers ménages se concentre dans les tranches inférieures de revenu. En 1975, leur revenu moyen s'élevait à \$6,908, 5 % environ de plus que celui de toutes les personnes seules<sup>(1)</sup>. Ces données indiquent à nouveau que les personnes seules touchant un très bas revenu ont tendance à partager soit par goût, soit par nécessité, leur logement avec d'autres unités familiales.

L'équipement ménager à la disposition des ménages individuels (personne seule), était en moyenne moins complet que chez les ménages de plus grande taille. Cela peut s'expliquer dans une certaine mesure par le fait que les ménages d'une personne ont des besoins moindres. Toutefois, l'absence de certains éléments de confort, par exemple que 4 % des ménages individuels (personne seule) contre 2 % des ménages unifamiliaux n'avaient pas de baignoire, ne peut s'expliquer que par des revenus généralement peu élevés.

### Ménages multiples

Environ 6 % de tous les ménages étaient en 1976 des ménages multiples. Toutefois, malgré leur caractère multiple, ces ménages étaient en moyenne de plus petite taille que les ménages unifamiliaux.

Il est extrêmement difficile, à partir des données de la présente étude, d'analyser en profondeur la corrélation qui existe entre le revenu et l'équipement ménager des ménages multiples. Leur nombre dans l'échantillon est trop petit pour permettre d'établir de façon fiable des répartitions selon diverses caractéristiques. C'est la raison pour laquelle la publication ne renferme que deux tableaux sur ces ménages (tableaux 8 et 9). Outre le désavantage que représente un échantillon trop restreint, il existe un autre problème, d'ordre conceptuel celui-là, concernant le revenu. Il est possible de répartir les ménages multiples, soit selon le revenu total du ménage, soit selon le revenu total de l'unité familiale économique principale. Les deux répartitions obtenues seront différentes du point de vue de la forme et, à moins d'une analyse selon les éléments constitutifs de ces ménages (tâche impossible avec le présent échantillon), elles risquent d'entraîner des conclusions erronées.

(1) Voir le tableau 27 dans Répartition du revenu au Canada selon la taille du revenu, 1975 (n° 13-207 au catalogue).

Percentage Distribution of All Households and Single Unit (Family) Households, by Selected Dwelling Characteristics and Household Facilities and Equipment, 1974 and 1976

Répartition en pourcentage de tous les ménages et des ménages unifamiliaux, selon certaines caractéristiques des logements et l'équipement ménager, 1974 et 1976

## NOTES AND DEFINITIONS

### Dwelling and Dwelling Characteristics

#### Dwelling

A dwelling is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside.

#### Single Dwelling

Includes single detached and single attached (double and row or terrace).

#### Single Detached Dwelling

This type of dwelling is commonly called a single house, i.e., a house containing one dwelling unit and completely separated on all sides from any other building or structure. As opposed to single detached dwellings, there are other types of dwellings such as double, duplex, row, terrace, apartment, flat, etc.

#### Period of Construction

The period of construction indicates the date of original construction without taking into consideration any minor or major modifications carried out subsequently.

#### Garage

The garage is located on the premises and used by household members or rented to others. Carports or communal parking spaces in the basement of apartment blocks or elsewhere are excluded.

#### Rooms

In determining the number of rooms in a dwelling, only those rooms which are finished and suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. The following are not counted as rooms: bathrooms, pantries, halls, clothes closets, and rooms used solely for business purposes. Summer kitchens, sunrooms, rooms in basements or attics are not counted unless they are finished off and suitable for living quarters throughout the year. "Kitchenettes" are counted if the normal kitchen functions are carried out therein and if they contain, as a minimum, cooking facilities (such as a stove or range) and a sink or tub.

## NOTES ET DÉFINITIONS

### Logements et caractéristiques des logements

#### Logement

Ensemble distinct de pièces d'habitation ayant une entrée privée donnant sur l'extérieur ou sur un corridor ou un escalier commun à l'intérieur.

#### Logement individuel

Comprend les logements individuels non attenants et les logements individuels attenants (maisons jumelées, en rangée ou de terrasse).

#### Logement individuel non attenant

C'est ce qu'on appelle communément une maison individuelle, c.-à-d., une maison ne contenant qu'un seul logement et qui n'est rattachée à aucun autre immeuble ou construction. Par opposition au logement individuel non attenant, il existe d'autres genres de logements comme les maisons jumelées ou maisons doubles, les duplex, les maisons en rangée, les maisons de terrasse, les appartements (de plain-pied ou non), etc.

#### Période de construction

Date d'achèvement de la construction initiale du logement, sans tenir compte des modifications mineures ou majeures subséquentes.

#### Garage

Le garage se trouve sur les lieux et sert aux membres du ménage ou est donné en location. Les abris d'autos ou les espaces de stationnement communs, dans les sous-sols des immeubles d'habitation ou ailleurs, ne sont pas compris.

#### Pièces

Pour calculer le nombre de pièces d'un logement, on ne compte que les pièces qui sont finies et qui peuvent servir à l'habitation, y compris les pièces occupées par les domestiques, les pensionnaires ou les membres de familles en pension. Ne sont pas comptées comme pièces: les salles de bains, les garde-manger, les corridors, les placards et les pièces uniquement utilisées à des fins commerciales. Les cuisines d'été, les solariums, les pièces au sous-sol ou au grenier ne sont comptés que si ils sont complètement aménagés et peuvent servir à l'habitation pendant toute l'année. Les "cuisinettes" sont comptées si l'on y fait normalement la cuisine et si elles contiennent, à tout le moins, des installations de cuisine (comme une cuisinière) et un évier ou une cuvette.

## Household and Household Characteristics

### Household

A person or a group of persons occupying one dwelling unit is defined as a "household". The number of households will therefore be equal to the number of occupied dwellings.

#### Type of Household(1)

For purposes of this report, households have been divided into the following three categories:

A single unit (unattached individual) household consists of one person aged 15 or over.

A single unit (family) household consists of two or more persons who are related to each other by blood, marriage or adoption. There are no other families or unattached individuals in this household.

A multi-unit household contains at least two unrelated family units, e.g., two or more unattached individuals living together, two or more families sharing one dwelling or any other combination.

### Family

The family in this report is defined as a group of individuals sharing a common dwelling unit and related by blood, marriage or adoption. Thus, all relatives living together were considered to comprise one family whatever the degree of family relationship.(2)

- (1) The classification of households by type, employed in this report, differs from that used in various census publications where households are classified as family or non-family. "The term family household refers to a household containing at least one census family... the term non-family household refers to one person living alone in a dwelling or a group of persons, occupying one dwelling, who do not constitute a census family." See 1976 Census of Canada, Dwellings and Households, Private Households by Type, May 1978 (Catalogue 93-806).
- (2) See also Income Distributions by Size in Canada, 1975 (Catalogue 13-207), page 10.

## Ménages et caractéristiques des ménages

### Ménage

Personne ou groupe de personnes occupant le même logement. Le nombre de ménages est par conséquent égal au nombre de logements occupés.

#### Genre de ménage(1)

Pour les besoins de la présente publication, on a réparti les ménages selon les trois catégories suivantes:

Un ménage individuel (personne seule) comprend une personne âgée de 15 ans ou plus.

Un ménage unifamilial se compose de deux personnes ou plus apparentées par le sang, par alliance ou par adoption. Il ne compte pas d'autres familles ou personnes seules.

Un ménage multiple contient au moins deux unités familiales non apparentées, par ex., au moins deux personnes seules vivant ensemble, deux familles ou plus partageant un logement ou n'importe quelle autre combinaison.

### Famille

On définit ici la famille comme un groupe de personnes qui partagent le même logement et qui sont unies par le sang, par alliance ou par adoption. Ainsi, tous les parents qui vivent ensemble forment une seule unité familiale, quel que soit leur lien de parenté(2).

- (1) La classification des ménages selon le genre utilisé ici diffère de celle adoptée dans les diverses publications du recensement, où l'on emploie les expressions "ménage familial" et "ménage non familial". "Un ménage familial comprend au moins une famille de recensement; le ménage non familial est constitué d'une personne vivant seule dans un logement ou d'un groupe de personnes partageant le même logement sans toutefois constituer une famille de recensement." Voir Recensement du Canada de 1976, Logements et ménages, Ménages privés selon le genre, mai 1978 (n° 93-806 au catalogue).
- (2) Voir aussi Répartition du revenu au Canada selon la taille du revenu, 1975 (n° 13-207 au catalogue), page 10.

### Unattached Individual

An unattached individual is a person living by himself or rooming in a household where he is not related to other household members. In the former case, the household is called a "single unit (unattached individual) household" and in the latter case it is a "multi-unit household".

### Family Unit

The term "family unit" is sometimes used in the text of this report to designate, collectively, unattached individuals and families with two or more members.

### Primary Economic Family

The family unit which contains the head of household is designated as the "primary economic family". In the case of single unit households which consist of either one unattached individual or one family, the question of primary economic family does not arise. Only in the cases of multi-unit households or all households considered together does the distinction between primary and secondary family units become significant. Secondary family units are, of course, those units whose members are not related to the head of a multi-unit household.

The above four categories are not fully consistent with classifications that are used in various census publications. Therefore, the data are not fully comparable.

### Household Head

For the purposes of this report the head of the household is determined as follows:

In single unit (family) households:

- (i) in families consisting of married couples with or without children, the husband is considered the head;
- (ii) in single-parent families with unmarried children, the parent is the head;
- (iii) in single-parent families with married children, the member who is mainly responsible for the maintenance of the family becomes the head; and
- (iv) in families where relationships are other than husband-wife or parent-child, normally the eldest in the family is considered the head.

### Personne seule

Une personne seule est une personne qui vit seule ou qui occupe une chambre dans un ménage avec lequel elle n'a aucun lien de parenté. Dans le premier cas, il s'agit d'un "ménage individuel (personne seule)" et dans le second, d'un "ménage multiple".

### Unité familiale

Le terme "unité familiale" est quelquefois utilisé dans cette publication pour désigner collectivement les personnes seules et les familles de deux membres ou plus.

### Famille économique principale

L'unité familiale comprenant le chef de ménage constitue la "famille économique principale". Dans le cas des ménages individuels qui sont constitués d'une personne seule ou d'une famille, la question de l'identité de la famille économique principale ne se pose pas. Il n'y a que dans les cas de ménages multiples ou lorsqu'on traite de l'ensemble des ménages que la distinction entre familles principales et familles secondaires est significative. Les familles secondaires sont, bien entendu, celles dont les membres ne sont pas apparentés au chef du ménage multiple.

Les quatre catégories précédentes ne sont pas tout à fait cohérentes avec les classements utilisés dans les diverses publications du recensement; par conséquent, les données ne sont pas entièrement comparables.

### Chef de ménage

Pour les besoins de la présente publication, le titre de chef de ménage est attribué de la façon suivante:

Dans les ménages unifamiliaux:

- (i) dans les familles constituées d'un couple marié avec ou sans enfants, à l'époux;
- (ii) dans les familles monoparentales avec enfants non mariés, au père ou à la mère présent;
- (iii) dans les familles monoparentales avec enfants mariés, au membre qui subvient en premier lieu aux besoins de la famille; et
- (iv) dans les familles où les liens ne sont ni d'époux-épouse ni de père (mère)-enfant, normalement au membre le plus âgé.

In single unit (unattached individual) households:

a person living by himself and occupying a dwelling alone is always reported as the head.

In multi-unit households:

the head of the household is also the head of the "primary economic family". He/she may either be an unattached individual or a family member.

#### Family Characteristics

Classification by family characteristics indicates the composition of a family. The groupings used are:

- (i) husband and wife only;
- (ii) husband and wife with children and/or other relatives; and
- (iii) all other families which include single parent families and families consisting of two or more related adults such as brothers and sisters.

#### Education

Classifications by education have been modified to maintain consistency with currently released Labour Force statistics. The categories are now: zero to eight years (zero to eight years of primary and secondary education completed); secondary and some post-secondary (some high school and no post-secondary, some post-secondary, and post-secondary certificate or diploma); and university degree. Previously the categories were: elementary or less (zero to eight years elementary schooling completed); secondary schooling (secondary school - some and completed, non-university - some and completed); and university (some and completed).

#### Household Size

The household size refers to the total number of persons in the household as constituted at the time of the Survey of Consumer Finances, and includes both adults and children.

#### Area of Residence

The classification by area of residence is based on the population size of the place where the unit resided at the time of the survey. Centres with a population of 30,000 or

Dans les ménages individuels (personne seule):

à la personne vivant seule et occupant un logement seule.

Dans les ménages multiples:

au chef de la "famille économique principale", qui peut être soit une personne seule, soit un membre d'une famille.

#### Caractéristiques des familles

Le classement selon les caractéristiques des familles indique la composition d'une famille. Les catégories utilisées sont les suivantes:

- (i) couple marié sans enfant;
- (ii) couple marié avec enfants et (ou) avec d'autres parents; et
- (iii) toutes les autres familles, telles les familles monoparentales et celles composées de deux adultes ou plus apparentés (frères et soeurs, etc.).

#### L'instruction

Les catégories selon l'instruction ont été modifiées pour conserver l'uniformité de nos données avec les chiffres de la population active qui sont publiés actuellement. Les catégories sont maintenant: zéro à huit années (zéro à huit années d'études primaires et secondaires); cours secondaires et quelques études postsecondaires (quelques études secondaires et aucune étude postsecondaire, quelques études postsecondaires, et certificat ou diplôme postsecondaire); et degré universitaire. Les catégories étaient auparavant: cours primaires ou moins (cours primaires, zéro à huit années); cours secondaire (cours secondaire - non terminé et terminé, études non universitaires - non terminées et terminées); et cours universitaire (non terminé et terminé).

#### Taille du ménage

Nombre total de personnes constituant le ménage comme il se présentait au moment de l'enquête sur les finances des consommateurs, ce qui comprend les adultes et les enfants.

#### Catégorie d'habitat

Le classement par catégorie d'habitat est établi d'après le degré de concentration de la population dans la région où vivait l'unité participante lors de l'enquête. Les centres urbains de

over are classified as "metropolitan areas" and the rest of the country as "non-metropolitan". The latter is further divided into non-metropolitan cities (with a population between 15,000 and 30,000), small urban areas (under 15,000), and rural areas. This classification is based on the 1971 Census classification of areas.

#### Household Head's Characteristics

Some of the tables are classified by certain characteristics (e.g., age) of the head of the household. These refer to the head's status at the time of the survey - Spring 1976. This is not necessarily the same as his status during the year 1975 for which the income data were collected.

#### Household Income

##### Total Income

The total income of a household is the sum of incomes received by all members of the household from any or all of the following sources:

1. Wages and salaries - Gross wages and salaries before deduction for such items as income taxes, unemployment insurance and pension funds, and excluding fringe benefits. Commission income received by salesmen as well as occasional earnings for baby sitting, for delivering papers, for cleaning, etc., are also included in this category. All income in kind such as meals or living accommodation is excluded.

Where individuals received military pay in the form of reserve army pay, and where this was a minor part of total income, such income was combined with wages and salaries.

##### 2. Military pay and allowances(3)

3. Net income from self-employment - Net income (gross income minus expenses) earned from self-employment either on own account or in partnership in an unincorporated business or in independent professional practice. Included here is net income from operating a farm as well as that earned from roomers and boarders.

(3) Family units whose major source of income is military pay and allowances are excluded from income distributions in published reports. However, the considerations which necessitate this exclusion are not applicable in this report. Accordingly, these family units are included in the estimates.

30,000 habitants et plus sont classés dans la catégorie "régions métropolitaines" et le reste du pays dans la catégorie "régions non métropolitaines". Cette dernière catégorie est ventilée de la façon suivante: villes non métropolitaines (dont la population se chiffre entre 15,000 et 30,000 habitants), petites régions urbaines (moins de 15,000) et régions rurales. Ce classement est fondé sur le classement des régions du recensement de 1971.

#### Caractéristiques du chef de ménage

Quelques-uns des tableaux sont présentés selon certaines caractéristiques (par ex., l'âge) du chef de ménage. Il s'agit de la situation du chef au moment de l'enquête, soit au printemps 1976. Cette situation ne correspond pas nécessairement à celle que l'on pouvait observer en 1975, année sur laquelle portent les données recueillies sur le revenu.

#### Revenu du ménage

##### Revenu total

Le revenu total d'un ménage est la somme des revenus touchés par tous les membres du ménage et provenant des sources suivantes:

1. Salaires et traitements - Montant brut des salaires et traitements, avant toute retenue pour l'impôt sur le revenu, l'assurance-chômage et les régimes de retraite, et sans les avantages sociaux. Les commissions des vendeurs ainsi que les revenus occasionnels pour la garde d'enfants, la livraison de journaux à domicile, les travaux de ménages, etc., sont également compris dans cette catégorie. Tous les revenus en nature, comme les repas ou le logement, sont exclus.

La solde des militaires de réserve, lorsqu'elle ne constitue qu'une part peu importante du revenu, a été ajoutée aux salaires et traitements.

##### 2. Solde et indemnités militaires(3)

3. Revenu net provenant d'un emploi autonome - Revenu net (revenu brut moins les dépenses) gagné soit à titre de travailleur indépendant établi à son propre compte ou d'associé dans une entreprise non constituée en société, soit par l'exercice privé d'une profession. Est également compris le revenu net provenant de l'exploitation d'une ferme ou de la location de chambres.

(3) Les unités familiales dont la principale source de revenu est la solde et les indemnités militaires sont exclues des répartitions du revenu dans les publications. Toutefois, les facteurs qui ont entraîné cette exclusion n'interviennent pas dans la présente publication. Ces unités familiales ont donc été prises en compte dans les estimations.

Net income from farming was to be reported by individuals who operated their own or a rented farm either on their own account or in partnership. Field instructions specified that net income was to be calculated by subtracting farm operating expenses and depreciation of farm assets from farm cash receipts. The latter were to include all money receipts from the sale of farm products including supplementary and assistance payments from governments. Income in kind is excluded.

Data were collected on gross rather than net receipts from roomers and boarders since the estimation of net income in this instance is difficult; during editing, net income from this source was assumed to be one third of gross receipts. Payments for room and board received from relatives were not included in income of the person receiving such payments.

4. Investment income - Bond interest, dividends, mortgage interest, net rents, estate income, bank interest and other investment income.

5. Government transfer payments - All social welfare payments from federal, provincial and municipal governments such as Old Age Security, Guaranteed Income Supplement, pensions under Canada and Quebec Pension Plans, unemployment insurance benefits, workmen's compensation, training allowances, veterans' pensions and allowances, mothers' allowances, pensions to the blind and the disabled. In the survey, family and youth allowances are treated as part of the income of the parent or guardian who claimed an income tax exemption for the children concerned. During the processing of the 1975 income data, a technical error produced a misadjustment in Old Age Security (OAS) pensions reported by persons in the 65 and 66 age group. The overall effect of this error on published income distributions can be considered negligible. The impact on estimated aggregates is similarly very small: OAS component is overestimated by 1.9% and total household income by 0.06%.

6. Miscellaneous income - Retirement pensions, annuities, scholarships, alimony and other items not specified or included in the above categories.

Les particuliers qui exploitent leur propre ferme ou une ferme louée, que ce soit pour leur propre compte ou à titre d'associés, devaient déclarer le revenu net provenant de cette activité. Les instructions de l'enquête précisait qu'il fallait calculer le revenu net en soustrayant du revenu agricole en espèces les dépenses d'exploitation ainsi que l'amortissement du matériel agricole et des bâtiments. Le revenu pécuniaire devait comprendre tous les revenus en espèces provenant de la vente de produits agricoles, y compris les indemnités supplémentaires et les crédits accordés par l'État. Les revenus en nature étaient exclus.

En ce qui concerne les revenus provenant de l'hébergement de chambreurs et de pensionnaires, les données recueillies portaient sur le revenu brut plutôt que sur le revenu net, car il est difficile d'établir une estimation du revenu net dans de tels cas; on a établi, au cours de la préparation du bulletin, que le revenu net provenant de cette source s'élevait à un tiers du revenu brut. Les paiements versés pour chambre et pension par des personnes vivant chez des parents n'ont pas été compris dans le revenu de la personne qui recevait ces paiements.

4. Revenu de placements - Intérêts d'obligations, dividendes, intérêts hypothécaires, loyer net, revenu foncier, intérêts bancaires et autres revenus de placement.

5. Transferts du gouvernement - Les indemnités de bien-être versées par les administrations fédérales, provinciales et municipales, telles que les pensions de vieillesse, le supplément du revenu garanti, les pensions versées par le Régime de pensions du Canada et le Régime des rentes du Québec, les prestations d'assurance-chômage, l'indemnisation des accidentés du travail, les allocations d'apprentissage, les allocations et pensions d'anciens combattants, les allocations aux mères nécessiteuses, les pensions d'aveugles et d'invalides. Dans le cadre de l'enquête, les allocations familiales sont considérées comme faisant partie du revenu du père, de la mère ou du tuteur qui a demandé une exonération d'impôt pour les enfants en cause. Lors du traitement des données de 1975 sur le revenu, une erreur technique a faussé les pensions de la sécurité de la vieillesse déclarées par les personnes âgées de 65 et 66 ans. Mais l'effet global de cette erreur sur les répartitions publiées est négligeable. Il est également minime pour ce qui est des estimations agrégées: les pensions de la sécurité de la vieillesse sont surestimées de 1.9 % et le revenu total de l'ensemble des ménages, de 0.06 %.

6. Revenus divers - Comprenant les pensions de retraite, rentes, bourses d'études, pensions alimentaires et autres revenus non précisés ou compris dans les catégories précédentes.

### Receipts Not Counted as Income

Gambling gains and losses, money inherited during the year in a lump sum, capital gains or losses, receipts from the sale of property or personal belongings, income tax refunds (including provincial income tax credits), loans received, loans repaid to an individual as the lender, lump sum settlements of insurance policies, and rebates of property taxes and other taxes were excluded as well as all income in kind such as free meals, living accommodation, or food and fuel produced on own farm.

### Quintile Tables

Quintile data were compiled by ranking weighted survey returns in ascending order by size of total income (in current dollars). Then the array was divided into five equal parts and five groups or quintiles were examined as to the different characteristics of units in each group.

The exercise of determining quintile points and tabulating each of the five quintiles by different characteristics was performed separately for "single unit (unattached individual) households", "single unit (family) households" and "all households" (which combines single unit (unattached), single unit (family) and multi-unit households). It should be noted that the ranking of units was performed independently (for these three populations) and the resulting data, e.g., for "all households" in the lowest quintile, are not simply the addition of single unit (family) in the first quintile and single unit (unattached) in the first quintile and multi-unit households in the first quintile.

### Household Facilities and Equipment

The household facilities and equipment mentioned in this report are self-explanatory. However, a note should be taken of the following remarks:

#### Bath Facilities

Refers to installed bath or shower facilities connected to a drain and using piped running water controlled by a tap.

#### Flush Toilets

Refers to a toilet connected to a drainage system and operated by means of water piped into it. Chemical toilets are excluded.

### Gains non comptés comme revenus

Sont exclus du revenu: les gains et pertes au jeu, une somme globale héritée au cours de l'année, les gains ou les pertes de capital, le produit de la vente de propriété ou de biens personnels, les remboursements d'impôt sur le revenu (y compris les crédits d'impôt provincial), les prêts reçus, les prêts remboursés à un particulier agissant comme prêteur, les règlements forfaitaires en matière d'assurance, les remboursements de l'impôt foncier ou d'autres impôts ainsi que les avantages en nature comme les repas gratuits et les facilités de logement ou encore la nourriture et le combustible produits et consommés sur place.

### Les tableaux par quintile

Les données quintiles ont été compilées en classant les résultats pondérés de l'enquête par ordre ascendant selon l'importance du revenu total (en dollars courants). On a ensuite divisé la série en cinq parties égales ou quintiles qui ont été étudiés d'après les différentes caractéristiques des unités de chaque groupe.

On a déterminé séparément les points quintiles et calculé les cinq quintiles selon différentes caractéristiques dans chacune des séries suivantes: ménages individuels (personne seule), ménages unifamiliaux et tous les ménages (comprenant les ménages individuels (personne seule), les ménages unifamiliaux et les ménages multiples). Il convient de signaler que l'ordre des unités a été établi séparément pour ces trois groupes; les données obtenues, c'est-à-dire pour "tous les ménages" dans le plus petit quintile, ne représentent donc pas simplement l'addition des ménages unifamiliaux, des ménages individuels (personne seule) et des ménages multiples du premier quintile.

### L'équipement ménager

L'équipement ménager mentionné dans la présente publication n'exige aucune explication. On devrait cependant prêter attention aux observations suivantes:

#### Baignoires

Se rapporte à une baignoire ou une douche installée, raccordée à un tuyau d'eau courante et munie d'un robinet et d'un tuyau d'écoulement.

#### Toilette avec chasse d'eau

Se rapporte à une toilette raccordée à un système d'écoulement et qui est actionnée par de l'eau courante. Les toilettes chimiques ne sont pas comprises.

#### Cooking Fuel

Included in the distribution of households with "other" type of fuel for cooking equipment are those with no cooking equipment. These account for a total of less than 1,000 households.

#### Clothes Dryer

For the purpose of this report "clothes dryer" refers to an individual piece of equipment with automatic electric controls, heating unit and rotating drum. However, if a household possessed a machine which combined in itself both washing and drying functions, the household was categorized as having an automatic washing machine and an electric dryer.

#### Television Sets

Households shown with colour television sets may also possess, in addition, one or more black and white television sets. Households indicated as having black and white television sets do not possess another type of television set.

#### Automobiles

The number of cars in a household indicates privately-owned passenger automobiles. Cars used solely for business purposes are excluded and so are panel or other trucks even though they may sometimes be used for passenger transportation. Station wagons are treated as passenger automobiles.

#### Housing Characteristic

##### Monthly Cash Rent

Refers to the dollar amount required to secure occupancy, but not the ownership of a dwelling during the current month of the survey (May 1976). Figures for monthly cash rent relate to all non-farm tenant-occupied dwellings.

#### Combustible utilisé pour la cuisson

Dans la répartition des ménages ayant d'autres genres de combustibles destinés aux installations de cuisson, on inclut les ménages n'ayant pas d'appareils de cuisson. On en compte moins de 1,000 au total.

#### Sécheuse

Pour les besoins de la présente publication "sécheuse" désigne un article d'équipement ménager ayant des commandes électriques automatiques, un élément chauffant et un tambour rotatif. Toutefois, si un ménage possédait une machine pouvant à la fois laver et sécher, on comptait le ménage au nombre de ceux possédant une machine à laver automatique et une sécheuse (électrique).

#### Téléviseurs

Les ménages qui possèdent un télécouleur peuvent également avoir un ou plusieurs téléviseurs en noir et blanc. Les ménages représentés comme ayant un téléviseur en noir et blanc ne possèdent pas d'autre genre de téléviseur.

#### Automobiles

Le nombre d'automobiles dans un ménage se rapporte au nombre de voitures particulières ou de tourisme appartenant à des particuliers. Les voitures ne servant qu'aux affaires ne sont pas comprises, ni les camionnettes ou autres camions, même s'ils servent parfois au transport de passagers. Les familiales font partie des voitures particulières ou de tourisme.

#### Caractéristique du logement

##### Loyer mensuel en espèces

Se rapporte à la somme versée pour avoir le droit d'occuper un logement sans en être le propriétaire pendant le mois de l'enquête (mai 1976). Les chiffres portant sur les loyers mensuels en espèces visent tous les logements non agricoles occupés par un locataire.

ALL HOUSEHOLDS SUMMARY TABLES

Part A. Household and Dwelling  
Characteristics

Table

1. Percentage Distribution of All Households by Household Income Groups, by Region and by Household and Dwelling Characteristics, 1976.
2. Percentage Distribution of All Households Within Household Income Groups, by Region and by Household and Dwelling Characteristics, 1976.
3. Percentage Distribution of All Households by Household Income Groups, by Area of Residence and by Household and Dwelling Characteristics, 1976.
4. Percentage Distribution of All Households Within Household Income Groups, by Area of Residence and by Household and Dwelling Characteristics, 1976.

TABLEAUX SUR L'ENSEMBLE DES MÉNAGES

Partie A. Caractéristiques des ménages  
et des logements

Tableau

1. Répartition en pourcentage de tous les ménages selon la tranche de revenu du ménage, selon la région et les caractéristiques des ménages et des logements, 1976.
2. Répartition en pourcentage de tous les ménages compris dans chaque tranche de revenu du ménage, selon la région et les caractéristiques des ménages et des logements, 1976.
3. Répartition en pourcentage de tous les ménages selon la tranche de revenu du ménage, selon la région de résidence et les caractéristiques des ménages et des logements, 1976.
4. Répartition en pourcentage de tous les ménages compris dans chaque tranche de revenu du ménage, selon la région de résidence et les caractéristiques des ménages et des logements, 1976.

ERRATA

The changes shown in this errata pertain to the education classes used in Table 13, pages 84-85. Education categories were redefined in 1975. To facilitate proper interpretation of historical data, a more detailed stub is now provided.

ERRATUM

Les modifications qu'indique cet erratum ont trait aux catégories d'instruction du tableau 13, pages 84-85. Les définitions de ces catégories ont été remaniées en 1975. Afin de permettre l'interprétation exacte des données chronologiques, nous présentons maintenant une description plus détaillée des catégories de cette rubrique.

ALL HOUSEHOLDS SUMMARY TABLES

Part B. Household Facilities  
and Equipment

Table

1. Percentage Distribution of All Households by Household Income Groups, by Region and by Household Facilities and Equipment, 1976.
2. Percentage Distribution of All Households Within Household Income Groups, by Region and by Household Facilities and Equipment, 1976.
3. Percentage Distribution of All Households by Household Income Groups, by Area of Residence and by Household Facilities and Equipment, 1976.
4. Percentage Distribution of All Households Within Household Income Groups, by Area of Residence and by Household Facilities and Equipment, 1976.

TABLEAUX SUR L'ENSEMBLE DES MÉNAGES

Partie B. Équipement ménager

Tableau

1. Répartition en pourcentage de tous les ménages selon la tranche de revenu du ménage, selon la région et l'équipement ménager, 1976.
2. Répartition en pourcentage de tous les ménages compris dans chaque tranche de revenu du ménage, selon la région et l'équipement ménager, 1976.
3. Répartition en pourcentage de tous les ménages selon la tranche de revenu du ménage, selon la région de résidence et l'équipement ménager, 1976.
4. Répartition en pourcentage de tous les ménages compris dans chaque tranche de revenu du ménage, selon la région de résidence et l'équipement ménager, 1976.

SINGLE UNIT (UNATTACHED INDIVIDUAL)  
AND MULTI-UNIT HOUSEHOLDS TABLES

Table

7. Percentage Distribution of Single Unit (Unattached Individual) Households Within Household Income Groups, by Age and by Household Facilities and Equipment, 1976.
8. Percentage Distribution of All Multi-unit Households Within Household Income Groups, by Household and Dwelling Characteristics, 1976.
9. Percentage Distribution of All Multi-unit Households Within Household Income Groups, by Household Facilities and Equipment, 1976.

TABLEAUX SUR LES MÉNAGES INDIVIDUELS (PERSONNE SEULE) ET SUR LES MÉNAGES MULTIPLES

Tableau

7. Répartition en pourcentage des ménages individuels (personne seule) compris dans chaque tranche de revenu du ménage, selon l'âge et l'équipement ménager, 1976.
8. Répartition en pourcentage de tous les ménages multiples compris dans chaque tranche de revenu du ménage, selon les caractéristiques des ménages et des logements, 1976.
9. Répartition en pourcentage de tous les ménages multiples compris dans chaque tranche de revenu du ménage, selon l'équipement ménager, 1976.

INCOME QUINTILE DATA

Table

10. Upper Limits of Income Quintiles of Households and Percentage Distribution of Total Income by Quintiles, 1967, 1971, 1973 and 1975.
11. Percentage Distribution of All Households Within Income Quintiles, by Selected Characteristics, 1967, 1971, 1973 and 1975.
12. Percentage Distribution of Single Unit (Family) Households Within Income Quintiles, by Selected Characteristics, 1967, 1971, 1973 and 1975.
13. Percentage Distribution of Single Unit (Unattached Individual) Households Within Income Quintiles, by Selected Characteristics, 1967, 1971, 1973 and 1975.

DONNÉES QUINTILES DU REVENU

Tableau

10. Limites supérieures des quintiles de revenu des ménages et répartition en pourcentage du revenu total par quintiles, 1967, 1971, 1973 et 1975.
11. Répartition en pourcentage de tous les ménages compris dans chaque quintile de revenu, selon certaines caractéristiques, 1967, 1971, 1973 et 1975.
12. Répartition en pourcentage des ménages unifamiliaux compris dans chaque quintile de revenu, selon certaines caractéristiques, 1967, 1971, 1973 et 1975.
13. Répartition en pourcentage des ménages individuels (personne seule) compris dans chaque quintile de revenu, selon certaines caractéristiques, 1967, 1971, 1973 et 1975.

Sources of Data

This report combines information from several surveys conducted by Statistics Canada in the spring of 1976. Demographic characteristics and information on income originate with the 1976 Survey of Consumer Finances. Labour force-related characteristics of population come from the April 1976 Labour Force Survey. These two surveys were conducted simultaneously and covered the same sample of households.

The Survey of Household Facilities and Equipment was taken a month later, jointly with the May 1976 Labour Force Survey. The latter survey, through its regular supplement, provided data on rents.

For detailed description of methodology and other technical aspects related to individual surveys, please consult corresponding regular survey reports.(1) The questionnaires used in the above surveys are appended to this report with the exception of the regular Survey of Consumer Finances questionnaires which can be found in the main report.(2)

Coverage

The sample used for this project represents all households in Canada with certain exceptions. Excluded are: households in the Yukon and Northwest Territories; households on Indian reserves; institutional households; military camps; other collective-type households such as those living in hotels, large lodging houses, clubs, logging and construction camps.

Sample

Statistics given in this report are based on observations collected from 21,151 households. Due to the rotational feature of the Labour Force Survey sample, five sixths of 35,000 dwellings selected for the April survey remained in the sample for enumeration in May 1976. However, after vacant dwellings, non-respondent and collective-type households were eliminated, there remained only the above-mentioned 21,151 households in the sample.

Provenance des données

La présente publication regroupe des données provenant de plusieurs enquêtes effectuées par Statistique Canada au printemps 1976. Les caractéristiques démographiques et les renseignements portant sur les revenus sont tirés de l'enquête sur les finances des consommateurs de 1976. Les caractéristiques de la population active proviennent de l'enquête sur la population active d'avril 1976. Ces deux enquêtes ont été menées simultanément et auprès du même échantillon de ménages.

L'enquête sur l'équipement ménager a eu lieu un mois plus tard, à l'occasion de l'enquête sur la population active de mai 1976. Cette dernière nous a fourni des données sur les loyers dans son supplément régulier.

Pour une description détaillée de la méthodologie et des autres aspects techniques de chacune des enquêtes, prière de consulter les rapports d'enquête réguliers correspondants(1). Vous trouverez en annexe à la présente publication les questionnaires utilisés dans les enquêtes précitées, à l'exception des questionnaires de l'enquête sur les finances des consommateurs qui figurent dans la publication principale(2).

Champ de l'enquête

L'échantillon utilisé dans ce projet est représentatif de tous les ménages du Canada à quelques exceptions près. Sont exclus les ménages demeurant au Yukon et dans les Territoires du Nord-Ouest ou dans une réserve indienne, les institutions, les camps militaires ainsi que d'autres logements collectifs comme les hôtels, les grandes pensions, les clubs, les camps de bûcherons et les baraquements de travailleurs.

Échantillon

Les statistiques présentées dans cette publication sont fondées sur des données d'observation recueillies auprès de 21,151 ménages. À cause du renouvellement de l'échantillon de l'enquête sur la population active, les cinq sixièmes des 35,000 logements échantillonnés en vue de l'enquête d'avril sont demeurés dans l'échantillon observé en mai 1976. Cependant, après élimination des logements inoccupés, des cas de non-réponse et des ménages collectifs, il ne restait que les 21,151 ménages susmentionnés dans l'échantillon.

- (2) Voir Répartition du revenu au Canada selon la taille du revenu, 1975 (n° 13-207 au catalogue).

## Processing Methods

Conditions for the inclusion of a household in the sample for this study were as follows:

- (i) the household had to provide complete information for both surveys conducted in April 1976 (Labour Force and Consumer Finances),
- (ii) the household had to remain in the sample for at least another month (to be available for May 1976 Labour Force and Household Facilities and Equipment interviews).

The first of these conditions was somewhat relaxed in a few cases where in multi-unit households the primary economic family supplied complete details but the secondary family yielded some non-response in terms of income. Such households were retained in the sample after the missing income information had been assigned on the basis of the non-respondent's demographic characteristics (such as sex, age and relationship to head) and labour force characteristics (such as labour force status, occupation and number of weeks worked). The procedure was to locate the nearest record on the survey file belonging to a respondent with similar characteristics and to assign the missing block of data from his record.

The second condition was also somewhat relaxed in cases where there was a change in the occupancy of a dwelling, or where, due to an error in household identification or due to the dwelling remaining vacant following the departure of previous occupants, corresponding household facilities and equipment details could not be determined or otherwise obtained. In the first instance, it was assumed that the facilities and equipment reported by new occupants were identical to those that were available to previous occupants of the dwelling. In the second instance, the complete set of data was assigned from the nearest similar record, similar with regard to the type of dwelling, household size and the type of water supply.

Information on rents (limited to non-farm dwellings) was first merged with the Household Facilities and Equipment Survey data file. Since both sets of data were collected simultaneously and neither survey presented any difficulties in terms of eliciting appropriate replies, there were no real problems in achieving successful integration of both files.

## Méthodes de traitement

Les conditions exigées pour qu'un ménage fasse partie de l'échantillon de la présente enquête étaient les suivantes:

- (i) le ménage devait fournir des renseignements complets aux fins des deux enquêtes effectuées en avril 1976 (Population active et Finances des consommateurs),
- (ii) le ménage devait continuer à faire partie de l'échantillon pour au moins un mois de plus (de manière à pouvoir se prêter en mai 1976 aux interviews relatives aux enquêtes sur la population active et sur l'équipement ménager).

Nous avons légèrement assoupli la première de ces conditions dans quelques cas où, dans les ménages multiples, la principale famille économique fournissait des données complètes alors que la famille secondaire ne répondait pas complètement aux questions portant sur le revenu. On a conservé ces ménages dans l'échantillon après imputation des renseignements manquants sur la base des caractéristiques démographiques connues des non-répondants (le sexe, l'âge et le lien avec le chef) ainsi que de leurs caractéristiques sur le plan de l'activité, la situation vis-à-vis de l'activité, la profession et le nombre de semaines travaillées. Il s'agissait de repérer le dossier le plus proche du fichier d'enquête appartenant à un déclarant aux caractéristiques semblables et d'imputer les renseignements manquants d'après ce dossier.

On a aussi quelque peu assoupli la seconde condition lorsqu'il y avait changement d'occupation d'un logement ou lorsqu'à cause d'une erreur d'identification du ménage ou à cause de l'inoccupation du logement par suite du départ des occupants précédents, il était impossible de déterminer ou d'obtenir les données voulues sur l'équipement ménager. Dans le premier cas, on a supposé que l'équipement décrit par les nouveaux occupants était identique à celui dont disposaient les occupants précédents du logement. Dans le second cas, toutes ces données ont été attribuées par déduction d'après le dossier qui semblait le mieux convenir, les points de ressemblance devant être le genre de logement, la taille du ménage et le genre d'alimentation en eau.

Les renseignements concernant les loyers (limités aux logements non agricoles) ont d'abord été incorporés à ceux des dossiers de l'enquête sur l'équipement des ménages. Étant donné que les deux séries de données ont été recueillies en même temps et qu'il n'y a pas eu de difficultés à obtenir les réponses appropriées dans les deux enquêtes, l'intégration des deux dossiers s'est effectuée pratiquement sans problèmes.

Following the consistency edit of the merged file (containing details from all used sources), the sample records were weighted to the estimated household totals.

The weighting process was carried out in two steps. First the sub-sample of family units selected for the project from the Survey of Consumer Finances was blown up to pre-determined totals of family units in accordance with the weighting procedure used in that survey. Then the weighting factors assigned to primary economic family units in households were adjusted to yield for each area of residence within a province a count of households that agreed with the corresponding total from the Survey of Household Facilities and Equipment.

Discrepancies between estimates contained in this report and those appearing in the Household Facilities and Equipment report are due mostly to the fact that both samples are not identical. There is also a minor difference in coverage (for example, certain private households, such as those residing in trailers or summer cottages, are represented in this publication but not in the Household Facilities and Equipment report).

Après vérification de l'uniformité des dossiers fusionnés (contenant des données provenant de toutes les sources), on a pondéré les chiffres des dossiers de l'échantillon en fonction du total estimatif des ménages.

Le travail de pondération a été effectué en deux étapes. En premier lieu, le sous-échantillon des unités familiales choisies pour le projet à partir de l'enquête sur les finances des consommateurs a été gonflé au niveau du nombre pré-établi des unités familiales conformément à la méthode de pondération utilisée dans cette enquête. Les facteurs de pondération affectés aux unités familiales économiques principales dans les ménages ont été ajustés de façon à produire pour chaque lieu de résidence dans une province un nombre de ménages conforme au total correspondant de l'enquête sur l'équipement ménager.

Toute discordance entre les estimations présentées ici et celles figurant dans la publication L'équipement ménager est attribuable en majeure partie au fait que les deux échantillons ne sont pas identiques. Il y a également une différence mineure en ce qui concerne le champ de l'enquête (par exemple, certains ménages privés, tels que ceux demeurant dans des roulottes ou des chalets d'été, sont pris en compte dans la présente publication mais non dans celle intitulée L'équipement ménager).

## RELIABILITY OF ESTIMATES

The estimates in this report are based on a sample of households and are likely to differ from results obtained on the basis of enumeration of the entire population. The sampling variability and errors caused by faulty response and bias introduced by non-response are discussed in the primary reports(1) for which the data were collected. The estimates in this report have inherited these elements.

The samples for the two surveys, which form the basic data source for the present report, were selected from within the monthly labour force sampling framework(2) which uses a stratified clustered sampling scheme. Sampling errors from such a complex sampling scheme are difficult to derive and are generally higher than the sampling errors of simple random samples of the same size. Statement A gives approximate estimates of errors of percentages for different sample sizes. Thus, referring to Table 1A, the "under \$2,000" income class contains 5.1% of all households in the Prairie provinces not having a garage. This estimate was determined from a sample of 642 cases (also from Table 1A). From Statement A, an estimate of 5.0% based on a sample size of 600 has an approximate standard error of 1.8%. Consequently, the 95% confidence interval for the percentage of households without a garage in the Prairie provinces in the "under \$2,000" income class is 1.5% to 8.7% ( $5.1\% \pm 2 \times 1.8\%$ ).

To assist in calculating confidence intervals for percentages, some tables have the sample sizes provided. However, it was found inconvenient to insert sample sizes by income classes; these are provided in this section in Statements B, C and D.

## FIABILITÉ DES ESTIMATIONS

Les estimations contenues dans la présente publication sont fondées sur un échantillon de ménages et de ce fait, peuvent être différentes des résultats obtenus à partir du dénombrement de toute la population. La variabilité et les erreurs d'échantillonnage causées par des réponses fausses et, les biais causés par la non-réponse sont examinés dans les rapports provisoires(1) qui portent sur les données primaires. Les estimations figurant ici ont hérité de ces éléments.

Les échantillons des deux enquêtes, qui constituent la source des données du présent rapport, ont été choisis à l'intérieur de l'échantillon mensuel de la population active(2), qui s'établit à partir d'un plan de sondage stratifié en grappes. Il est difficile de déceler les erreurs d'échantillonnage dues à un plan de sondage aussi complexe; de plus, leur nombre est généralement supérieur à celui des erreurs d'échantillonnage rencontrées dans des échantillons aléatoires simples de même taille. L'état A donne des estimations approximatives des erreurs de pourcentages pour différentes tailles d'échantillons. Ainsi, en ce qui concerne le tableau 1A, 5.1 % de l'ensemble des ménages des provinces des Prairies n'ayant pas de garage se trouvent dans la tranche de revenu "moins de \$2,000". Cette estimation a été faite d'après un échantillon de 642 cas (toujours d'après le tableau 1A). L'état A indique qu'une estimation de 5.0 % basée sur un échantillon de 600 cas présente une erreur type d'environ 1.8 %. Il en résulte que l'intervalle de confiance de 95 % pour le pourcentage des ménages des provinces des Prairies n'ayant pas de garage et qui se trouvent dans la tranche de revenu "moins de \$2,000" varie entre 1.5 % et 8.7 % de l'ensemble des ménages n'ayant pas de garage ( $5.1\% \pm 2 \times 1.8\%$ ).

Pour faciliter le calcul des intervalles de confiance des pourcentages, la taille de l'échantillon est indiquée dans certains tableaux. On a cependant jugé peu pratique d'indiquer la taille de l'échantillon dans les tableaux qui contiennent une répartition par tranche de revenu; on trouvera ces indications dans les états B, C et D de la présente section.

| 20,000 .....  |   |               |               |               |               |               |               |      |

(1) This table is derived from the formula  $2 \sqrt{\frac{PQ}{n}}$  where P = the percentage of the population with a given characteristic,

Q = 100 - P and n is the sample size. Thus on the assumption that standard errors for the estimates in this report are twice as large as those in simple random sampling from a binomial population then each entry in this table would equal approximately the standard error of the estimate. — Ce tableau a été établi d'après la formule  $2 \sqrt{\frac{PQ}{n}}$  où P représente le

pourcentage de la population présentant une caractéristique déterminée, Q est égal à 100 - P, et n représente la taille de l'échantillon. Si l'on admet donc que les estimations de la présente publication sont entachées d'erreurs types deux fois plus grandes que s'il s'agissait d'un échantillonnage aléatoire simple parmi une population binomiale, chacun des chiffres de cette table devrait être à peu près égal à l'erreur type d'estimation.

(2) For sample sizes greater than 20,000, if n is multiplied by 100 the sampling error is divided by 10. Generally, if n is multiplied by "a", then the sampling error is divided by  $\sqrt{a}$ . — Pour les tailles d'échantillon supérieures à 20,000, si on multiplie par 100, l'erreur d'échantillonnage est divisée par 10. En règle générale, si on multiplie n par "a", l'erreur d'échantillonnage est divisée par  $\sqrt{a}$ .

22 TOILET FACILITIES

One flush toilet ☐  
Two flush toilets ☐  
Three or more flush toilets ☐  
Chemical toilet ☐  
No flush or chemical toilet ☐  
23 FUEL FOR PRINCIPAL COOKING EQUIPMENT  
Oil or other liquid fuel ☐  
Piped gas ☐  
Bottled gas ☐  
Electricity ☐  
Coal or coke ☐  
Wood ☐  
Other (describe in comments) ☐  
None (skip to question 25) ☐

24 DATE COOKING EQUIPMT. MANUFACTURED

In last 5 years ☐  
6 to 10 years ago ☐  
Over 10 years ago ☐

25 REFRIGERATOR

Electric refrigerator ☐  
Other mechanical refrigerator (gas, kerosene, etc.) ☐  
No electrical or mechanical refrigerator (skip to question 27) ☐

26 DATE REFRIGERATOR MANUFACTURED

In last 5 years ☐  
6 to 10 years ago ☐  
Over 10 years ago ☐

27 HOME FREEZER

Yes ☐ No ☐

28 WASHING MACHINE

Combination automatic washer-dryer (combined as a single unit) ☐  
Separate automatic washer ☐  
Electric wringer-washer ☐  
Other electric washer ☐  
None (skip to question 30) ☐

29 DATE WASHING MACH. MANUFACTURED

In last 5 years ☐  
6 to 10 years ago ☐  
Over 10 years ago ☐

30 CLOTHES DRYER, SEPARATE FROM WASHER

Electric ☐  
Gas ☐  
None ☐

31 AUTOMATIC DISHWASHER

Yes ☐ No ☐

32 TOTAL NUMBER OF TELEPHONES INCLUDING EXTENSIONS

One ☐  
Two ☐  
Three or more ☐  
None ☐

33 COMBINATION RADIO-RECORD PLAYER

Yes ☐ No ☐

34 RECORD PLAYER WITHOUT RADIO

Yes ☐ No ☐

35 TOTAL NUMBER OF RADIOS OF ALL TYPES EXCLUDING CAR RADIOS

One ☐  
Two ☐  
Three ☐  
Four or more ☐  
None ☐

36 ARE ANY OF THESE RADIOS FM RECEIVERS?

Yes ☐ No ☐

37 ARE ANY OF THESE RADIOS PORTABLE OR TRANSISTOR RADIOS?

Yes ☐ No ☐
